TelPay OTC 3 Network Configuration

You do not have an existing Microsoft SQL Server

One computer must be designated as an "OTC Server Computer" to the other computers. It must be running Windows 98 or higher. Perform a "Complete Install" of OTC on this computer.

Perform a "Client Install" on the remaining computers. When you are prompted for the "MSDE Credentials", select the name of the "OTC Server Computer".

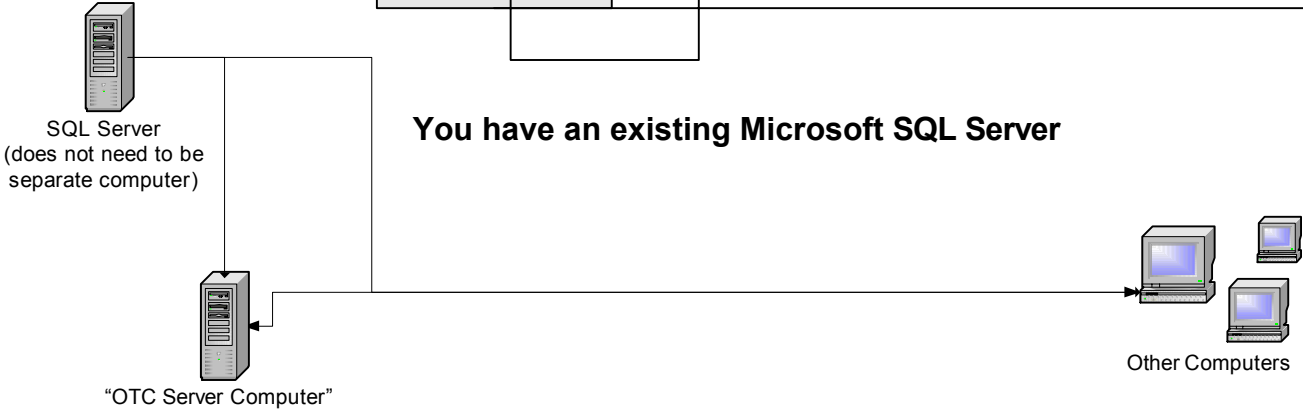

Automatic Update Configuration

After installing OTC, you must share the "Update" folder with "full" or "read/write" access.

In OTC, choose the update folder on the "OTC Server Computer" when prompted for this.

TelPay OTC 3 Network Configuration

You have an existing Microsoft SQL Server

One computer must be designated as an "OTC Server Computer" to the other computers. This does not need to be your SQL Server computer. It must be running Windows 98 or higher.

Perform a "Client Install" of OTC on this computer. Check the "Copy Database" option when prompted to do so.

Within the MSDE / SQL Server Configuration Tool, select the location of the SQL Server you are connecting to. If you wish to move the database file, cancel the configuration.

Perform a "Client Install" on the remaining computers. When you are prompted for the "MSDE Credentials", select the name of the "SQL Server Computer".

Automatic Update Configuration

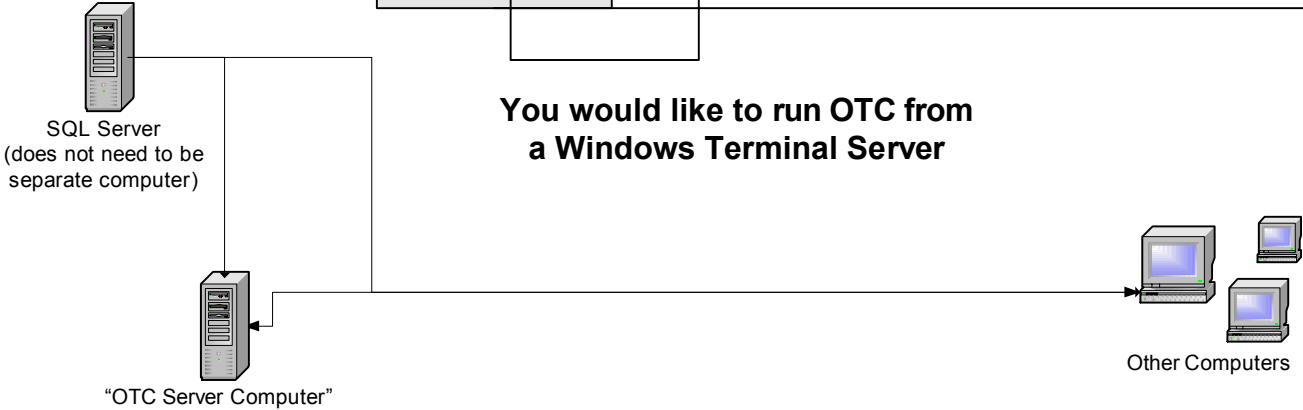

After installing OTC, you must share the "Update" folder with "full" or "read/write" access.

In OTC, choose the update folder on the "OTC Server Computer" when prompted for this.

TelPay OTC 3 Network Configuration

You would like to run OTC from
a Windows Terminal Server

The Terminal Server computer will be an "OTC Server Computer" to the other computers. This does not need to be your SQL Server computer. It must be running Windows 2000 Server or higher. Either a "Complete" or "Client" install can be used, depending on whether or not you already have a SQL Server.

Other computers will connect using Microsoft Terminal Software, such as the Remote Desktop Connection in Windows XP Professional.

Within the MSDE / SQL Server Configuration Tool, select the location of the SQL Server you are connecting to. If you wish to move the database file, cancel the configuration.

Automatic Update Configuration

After installing OTC, you must share the "Update" folder with "full" or "read/write" access.

In OTC, choose the update folder on the "OTC Server Computer" when prompted for this.
